

**PMA Ergonomics Checklist** 

Through its alliance with OSHA, PMA has developed this checklist that either one person at a facility or a full safety committee can use to identify and think about potential safety issues in the plant.

For the user's convenience, an "action notes" section is included at the bottom of the checklist so that any items that may need to be corrected or further explored can be recorded. A reference section is also included at the end of the checklist to offer additional helpful resources related to this topic.

Questions	Yes	No	N/A
Do you train employees on recognizing potential ergonomic			
risks, such as:	_	_	_
• posture			
• force			
• repetition			
• contact stress			
• vibration			
Do you provide specific training to employees concerning			
how they can properly perform their jobs and use their tools			
to decrease ergonomic-related injuries?			
Have ergonomic analyses been performed and records maintained for various job tasks in the plant?			
Do job tasks require repeated or prolonged raising of the			
hands above shoulder height?			
Are employees' necks and shoulders placed in an awkward			
position, such as the head turned to the side, bent forward or			
bent backward, to view job tasks?			
Do job tasks create pressure points between any parts of the			
body and the workstation or tool surface (wrists, forearms,			
back of thighs)?			
Can work be done directly in front of the body without bending the torso?			
Do you provide rest breaks, in addition to the regular rest			
breaks, to relieve stress from repetitive motion tasks?			
Are tools, instruments and machinery shaped, positioned			
and handled so that tasks can be performed to minimize			
strain on all parts of the body?			
(Such as without elevated or extended reaches; bending or			
twisting of the back, neck or wrist; slick, too small or too			
large tool handles; etc.)			

Questions	Yes	No	N/A
Is office furniture and equipment adjusted, positioned and arranged to minimize strain on all parts of the body?			
(Such as furniture that allows the feet to be placed flat on the floor; the buttocks, thighs and back to be completely and evenly supported; the arms supported but still able to rest comfortably at the side, etc.)			
Are mechanical lifting assists provided when manual lifting is required and weights are above NIOSH Lifting Equation Guidance? See references section below.			
Have employees received training in safe lifting practices?			
Are work materials ergonomically positioned for safe lifting?			
Is proper personal protective equipment used by employees when appropriate? Examples include knee pads and vibration-dampening gloves.
